

EVERY RIDE HAS A STORY

Built for Stories...

Of Riding to Everest

Of Exploring Europe

Of Riding Across America

Of Circumnavigating the U.S.

Born In AU Where the Story Starts

Of Setting World Records

...Since 1990

At GreenSpeed, riding is about unlocking what's possible. Since 1990, every design has been refined to what truly matters; creating a ride that feels natural, capable, and rewarding. It's a balance of precision and simplicity, where nothing is added without reason and nothing essential is left behind.

For riders, that opens the door to something bigger. It's about rediscovering your sense of adventure or finding it for the first time. For years, GreenSpeed trikes have been used to explore personal limits across the globe. But adventure doesn't have to mean far away or extreme; it can be as simple as riding farther than yesterday, exploring a new path, or pushing into something that once felt out of reach. With that comes freedom for more miles, more confidence, and more ways to move forward.

**Push your boundaries—or redefine them entirely.
GreenSpeed is built for your story.**

WHAT'S YOURS?

With Design That Matters

Electric Assist

Makes longer rides easier, hills manageable, and adventure more accessible. Trikes with Electric Assist option show [e+]

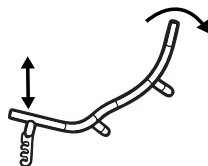

Folding

Lightweight and compact folding make your trike easy to ride, transport, and live with.

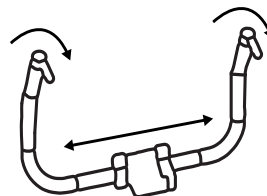

Hi-Lo Seat

All-day comfort with easy height and recline adjustment to match your ride.

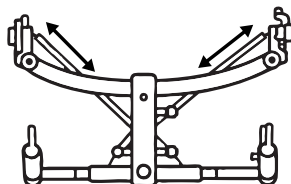

TruControl

Handlebars adjust to your reach and width for natural comfort and confident control.

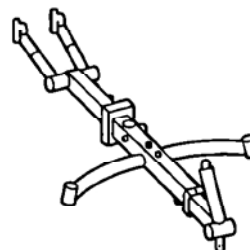

Cross-Over Steering

Linkage steering and geometry delivers precise handling, easy tracking, and a tight turning radius.

Custom Tubing

Custom designed tubing optimizes frame strength and efficiency for each specific model platform.

GT Platform

The GT is built for riders who want performance that's fast, responsive, and genuinely playful without sacrificing comfort. Inspired by GreenSpeed's early designs, this platform blends lightweight efficiency with agile handling, creating a ride that feels playful, refined, and ready for long days in the saddle. A lighter aluminum frame, grippy tires, and compact riding position sharpen responsiveness, while a slightly more upright posture keeps the GT approachable and comfortable mile after mile.

Each GT model brings its own personality from the compact, go-kart-like GT20, to the rear-suspended GT20-RS, to the smooth, distance focused GT26. All are built on the same performance-driven foundation designed to help riders explore further, ride longer, for whatever story they choose. Each model has an optional electric assist.

Magnum Platform

The Magnum is built on a simple idea: more riders should experience what a trike can truly do. Designed with confidence at its core, this platform combines GreenSpeed's performance DNA with a robust aluminum frame, high weight capacity, and adaptable design that encourages riders to keep exploring and not hold back. Wider tires smooth rougher terrain, while a stable stance and negative camber keep the Magnum planted and confident through turns and under load.

From the compact and capable Magnum to the roomier Magnum XL, to the distance focused Magnum Big Wheel, each model is built on the same dependable foundation while offering its own personality and fit. This is where comfort meets capability, helping riders go farther, ride with confidence, and create stories they may never have thought possible. Each model has an optional electric assist.

Aero Platform

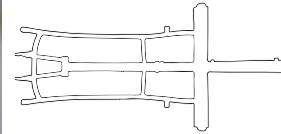

The Aero is built for riders who know there's more speed to find and want a smarter, more sustainable way to reach it. Inspired by high-performance racing, every element is shaped to reduce frontal area and move efficiently through the wind. A low, reclined seat position keeps your profile tight, while tank steering tucks your arms close to the frame. Teardrop shaped outriggers and compact 16" front wheels further reduce drag while helping the Aero spin up quickly and maintain speed with less effort.

But the Aero's real advantage is how it supports the rider. Comfort keeps you engaged longer, producing smoother, more consistent power mile after mile. With a history of world record-setting performance, the Aero is built for riders ready to write their own story of what's possible.
